the first dap worked the second did nothing
the green color was myself i changed the main color of the tool. it was magente before. dont mind it.

It works great! Am i currently painting the texture or the lightmap?

ChatGPT said:

You said:

lightmap painting should be easy to add then?

ChatGPT said:

You said:

very good. One question: Lightmaps have usually a smaller resolution than the original texture. It would be nice if they had ideally the same size or at least the largest posible. In general what are the limits of the bsp format and moder ports like the rerelease or ironwail?

ChatGPT said:

You said:

very good. Keep in mind that we also have the rudimentaryly implemented feature of baking cycling lighting to the lighmaps. But i guess we will revisit that later. For now lets get painting textures and lightmaps working.

You said:

works perfect! Texture paint as well as lightmap. The resolution of the lightmap seems pretty low but it works.
