Read the chat history in the repository. Is there a 0.15.1 that fixes the install problem?

I'll inspect the latest feature-branch history, read the committed chat-history PDFs, and check the tags/commits and install-related changes to determine whether a v0.15.1 actually exists and whether it fixes the activation error.

Verified release history and checked repository evidence

Fetched pull request metadata, repository contents, releases, tags, trees, PDFs, and branch history

Inspected local repository files

Inspected repository structure, releases, tags, and installation files

Read PDF skill and review instructions

Searching the web

Tested direct PDF download access

Reviewed project records and assessed available evidence sources

Searching the web

Verified release evidence

Concluded release status

Investigated GitHub history, PDF extraction, and Quake lightmap workflows

The chat-history export confirms the latest exchange ended with the undefined-callback error and the `c66f7bbb` fix commit—not with a v0.15.1 release. I also found a version inconsistency in the current source (`__init__.py` says 0.15.0 while `addon.py` still defines `ADDON_VERSION = (0, 14, 3)`), so I'm checking whether that constant is operational and whether a post-fix install ZIP was actually built.

Confirmed version status

Summarizing version status

ChatGPT said:

You said:

okok... :D Just give me an download for a fixed version

ChatGPT said:

You said:

ok it loads. Ericw and Ironwail are set. What should i click to generate the test results?

ChatGPT said:

You said:

i dont see any full game map audit. Also i dont have any acess to most of the menus before i dont imort a map.

Worked for 16s

ChatGPT said:

You said:

downloaded v.0.15.0 installed and the panel says 14.3.
i set ericw and ironwail
below it is a "validate maps in active game" button.
when i press it blender does something but did not react for minutes until forced it to close. Is that the audit button you talked about? What does it do?

Worked for 10s

ChatGPT said:

You said:

I have a lot of mods and map packs.
I still dont find the Audit button especially not before importing a map cause ther are only a few controls available then but also afterward cant find the button.

Worked for 14s

ChatGPT said:

You said:

no it definitely is not there. Check the code.
Project & Source contains:
"Quake installation and Mod"
Installation Folder
Game / Mod
Browse Maps
Validate in Active Game
"External Tools"
Ericw-tools folder
ironwail executable
demo
launch ironwail

Worked for 8s

ChatGPT said:

You said:

it crashes. But do we need those tests right now? Shouldnt we better keep on developing and test each feature when its time and leave the whole testing of everythin on all maps as a more final thing to do to find the last bugs?

Worked for 20s

Ok then lets get coding again. I have some feedback on the current version:

Firstly I can now better describe what i meant with the middle mouse butto for

fps movement:

at the moment when i press FPS / Walk navigation it sends the camera to the
info player start and i can move around usind wasd and mouse until i leftclick
at the moment when i hold mmb i can look around.

What i want:
pressing the fps walk navigation button doesnt send me to info player start.
Instead it toggles into fps mode meaning: i still have to press mmb to look
around but i can use wasd to move the camera until i switch it off again.

I imported e1m1 from the original game.
selected a face and detaced it
went to texture paint and doodled a bit
exportet the map.
seems like the texture pain also affected the lightmap somehow. There are dark
spots that shouldnt be there.
also tried exporting an BSPX version. The export failed:
Enhanced BSPX lightmap currently cannot be combiuned with detached face-local
textionfo projections.
detached another face, doodled on it.
then detached two more neigboring faces together and painted on them to.
exported as standard and checked in ironwail:
the initial face still with the right doodle but the lighmap artefacts
the second face has some paint on it but not the way i painted it and its
texture is wrong
lastly the two neigboring faces have the checkered missing texture and no paint
to find.

Worked for 30m 48s

did the same test: first face detached painted, the second face detached
painted and then two neigboring ones detached and painted togeter. Works
perfect.
FPS Button does nothing. Klicking stopFPS Navigation afterwards does not work
